EDUCATION

St. John's University

M.S. in Artificial Intelligence and Data Science, GPA: 3.9

Queens, NY

Sept. 2025 – Dec. 2026 (Expected)

St. John's University

B.S. in Computer Science, GPA: 3.85, Summa Cum Laude

Queens, NY

Sept. 2022 – Dec. 2025

- **Honors:** Summa Cum Laude, Dean's List (all semesters), CCPS Honors Society, University Honors Program
- **Coursework:** Data Mining & Predictive Modeling, Distributed Big Data Analytics, Software Engineering, Database Management Systems, Analysis of Algorithms

EXPERIENCE

Research Assistant / Full-Stack Developer

Aug. 2025 – Present

Bukhari Lab – Medicaddie (NSF-funded)

Queens, NY

- Built bi-directional integrations with Athena and Epic EHR systems using SMART on FHIR and HL7 standards, enabling medical code and patient data exchange with external EHRs
- Designed API endpoints powering an audit engine that runs pre-submission checks catching billing errors on medical claims before submission
- Led a full UI/UX redesign using React, Tailwind CSS, and shadcn/ui; built across the stack with Python, SQL, and React/JavaScript

Research Assistant

Jan. 2024 – Jan. 2025

Codify – AI Tutor

Remote

- Built an AI tutor product centered on a RAG-based chatbot LLM that guides students toward answers rather than giving them directly, using student memory to generate personalized practice questions
- Built with Python and OpenAI models for the LLM/RAG pipeline, React (Vite, Bootstrap) for the frontend, and AWS RDS/NoSQL for data storage

PROJECTS

Sonar – A&R Intelligence Agent | *Next.js, TypeScript, Claude API, MCP, Redis*

Apr. 2026

- Built an autonomous AI talent-scouting agent that runs a multi-phase research pipeline (discovery, validation, scoring, outreach drafting) and streams results as live artist cards
- Used the Model Context Protocol (MCP) to plug in tool servers (Spotify, Reddit) and Redis Stack (Redisearch HNSW vector index) for semantic similarity search and long-term agent memory
- Won "Most Innovative Project" at an IBM Enterprise AI Agent hackathon

Slider – AI-Powered PowerPoint Add-in | *React, TypeScript, OpenAI GPT-4o, LangChain*

Feb. 2026

- Built a PowerPoint add-in with a conversational AI interface generating slides, charts, and research from natural-language prompts; built the Express.js backend and Supabase persistence layer
- Placed **2nd** at St. John's Hacks

The Not Project – Storytelling Platform | *Next.js, TypeScript, Express, better-auth*

Jan. 2025 – Present

- Built and maintain a live, production storytelling platform (thenotproject.com) with a public site and an internal admin dashboard for editorial content management
- Implemented session-based auth with Google OAuth, role-based access control, a Tiptap rich-text editor, and CI/CD on Vercel

Elden Ring Proximity Voice Chat Mod | *C++, Node.js, WebRTC*

- Building a proximity voice chat mod with a co-developer, pairing a C++ DLL injected into the game client with a Node.js WebRTC signaling server for real-time peer connections
- Deployed the signaling server on a DigitalOcean VPS behind Caddy for automatic TLS

TECHNICAL SKILLS

Languages: Python, Java, SQL, JavaScript, TypeScript, C++

Frontend: React, Next.js, Tailwind CSS, shadcn/ui, Electron

Backend/APIs: Node.js, Express.js, REST APIs, FHIR/SMART on FHIR, HL7

AI/ML: OpenAI & Anthropic APIs, LangChain, RAG pipelines, MCP, scikit-learn, Spark MLlib

Databases & Cloud: PostgreSQL, Supabase, AWS (RDS, NoSQL, ECS), Redis, Docker
